LEARNING OBJECTIVES

Upon completion of this educational activity, participants will be able to:

1. Distinguish research, problem solving, nursing process, quality improvement and evidence-based practice.
2. Identify practice problems that need research solutions.
3. Discuss the current state and future directions of genomics in cancer care.
4. Identify challenges and concerns related to integrating genomics into cancer care.
5. Discuss methods of getting involved in writing publications and participating in research within oncology/BMT.
6. State the importance of lung cancer screening and how it relates to patient outcomes.
7. Describe how to integrate evidence-based fall-risk screening tools into oncology nursing care.
8. Identify and understand challenges and concerns related to cardio-oncology and patient outcomes.
9. Identify patients who would benefit from a palliative medicine consult.
10. Explain the role of research in the patient journey.
