

Georgia Center for Oncology Research and Education (GA CORE)

Clinical Trials Navigation Program

Georgia CORE's Clinical Trials Navigation (CTN) program is a 3-year pilot that utilizes a centralized clinical trials navigator model. The program aims to help Oncologists, Research Teams, Patients, and Caregivers identify oncology trials closest to where patients reside.

The program is built on three pillars:

- **NAVIGATION** – *Providing a bridge between physicians and their staff to identify possible clinical trials for their patients.*
- **EDUCATION** – *Providing program awareness to the research community, partners, and patients while addressing barriers to clinical trial accrual, especially amongst minority and rural populations.*
- **DATABASE MANAGEMENT AND ADMINISTRATION** – *Providing a comprehensive database with real-time updates of clinical trials in Georgia. Our database can be found at www.georgiacancerinfo.org under the Clinical Trials, Doctors, and Cancer Center tab.*

For more information, contact navigator@georgiacore.org

Georgia CORE would like to thank the following sponsors for their generous support of the Clinical Trials Navigation program.

To support this program and to learn more about sponsorship opportunities, please contact Lynn Durham (ldurham@georgiacore.org)

To access our clinical trials database, scan the QR code.

To add your clinical trials to our database, please contact navigator@georgiacore.org
